

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph that begins on line 18 on page 14 as follows:

The total score 504 for the company 502 is indicated as depicted in Figure 5. It is calculated by multiplying the baseline score 508 for each criteria question 520-538 by the corresponding number of points 506 available for the corresponding criteria question 520-538 and then adding these products together. Thus, the total score for the company 502 illustrated in Figure 5 is 47.0%. ~~{Roland, your picture had a total score of 41.0%. However, when I multiplied each point by its respective baseline score and added these together, I came up with the 47.0% result. Therefore, I modified the picture to reflect this result. Am I correct in making this modification, or have I miss added or misunderstood the invention? Thanks.}~~
